Pacific Northwest Seismic Threats

Crustal earthquakes
e.g. **M6.8 Nisqually** – Feb 2011
“point source earthquake”

Megathrust earthquakes

- magnitude 9 events
- last event Jan 1700
- recurrence 300-600 years
- “finite source earthquake”

211 km

Automated TV warning

Studio in **Tokyo**

参院決算委
国会中継

March 11, 2011

Japan

Communicating the warning

TV and radio announcements

- 124 of 127 TV stations (98%)
- 41 AM, 35 FM radio (75%)

J-Alert messages

- 226 municipalities receive the warnings
- 102 announce them with public address systems

Cell phones

- 3 companies (Docomo, AU, Softbank)
- 52 million can receive them (47%)

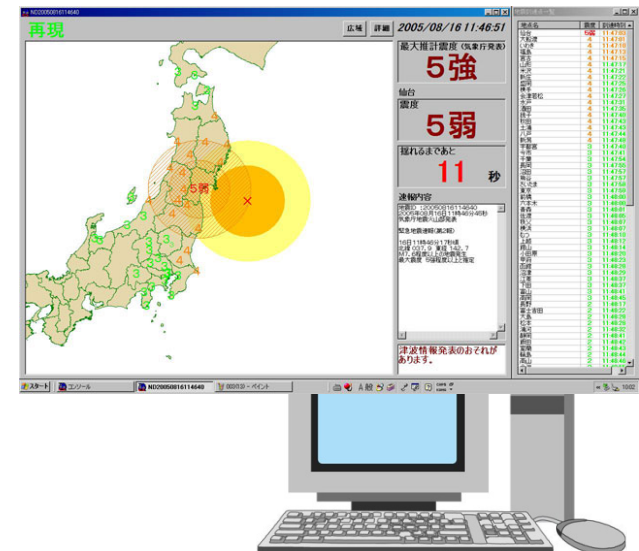

Dedicated providers serve

- power plants
- factories
- schools
- hospitals
- shopping malls

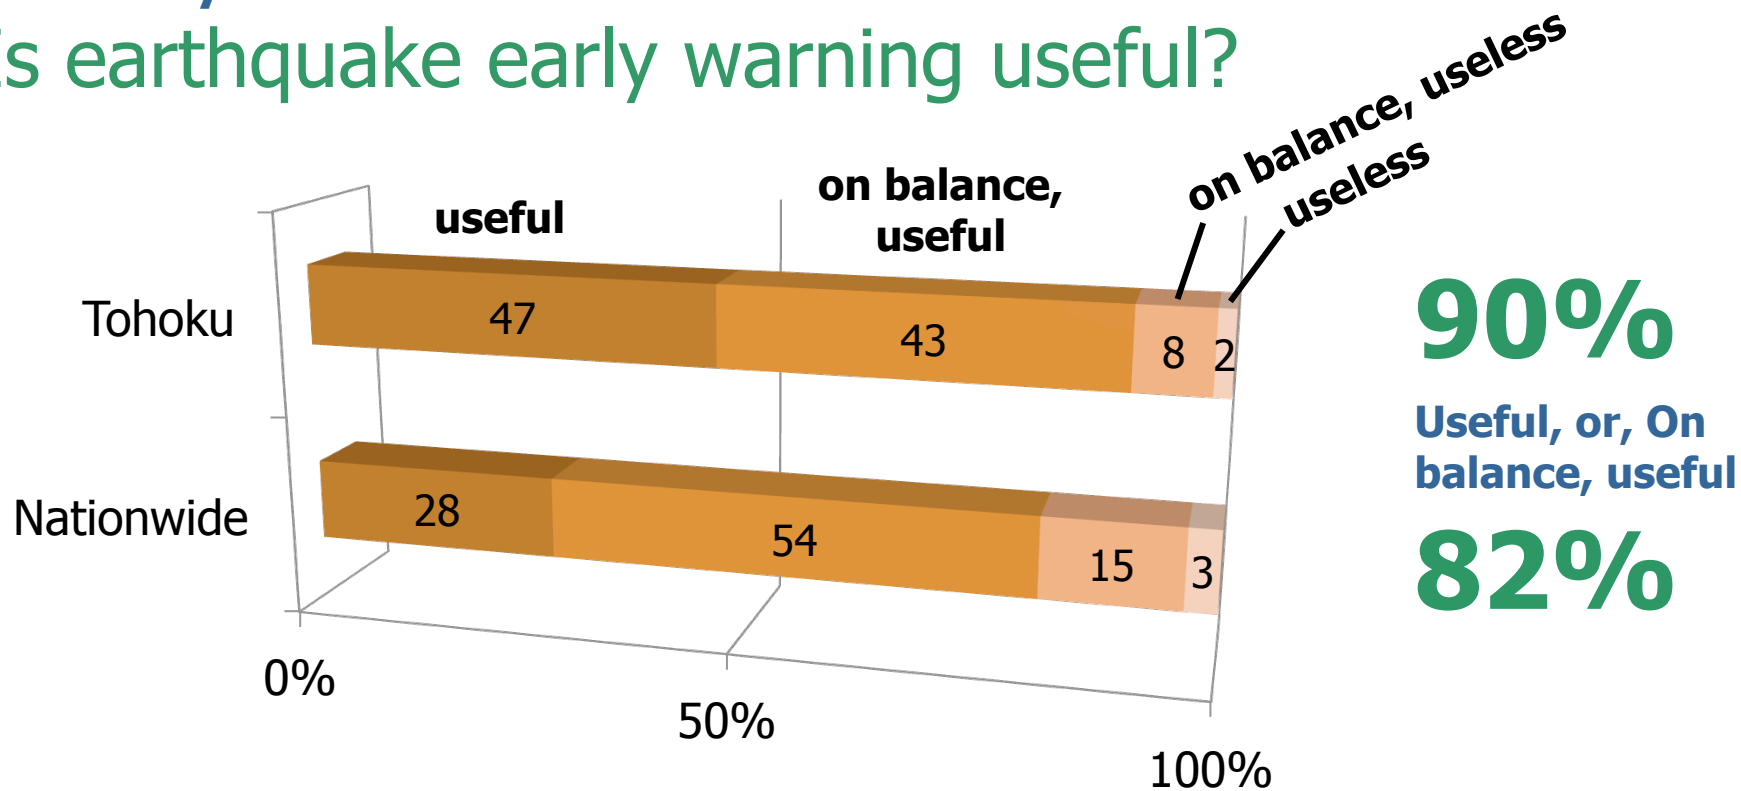

earthquake
location and
hazard

estimated
shaking in your
area

JMA Survey of the Public

Is earthquake early warning useful?

Why is early warning useful?

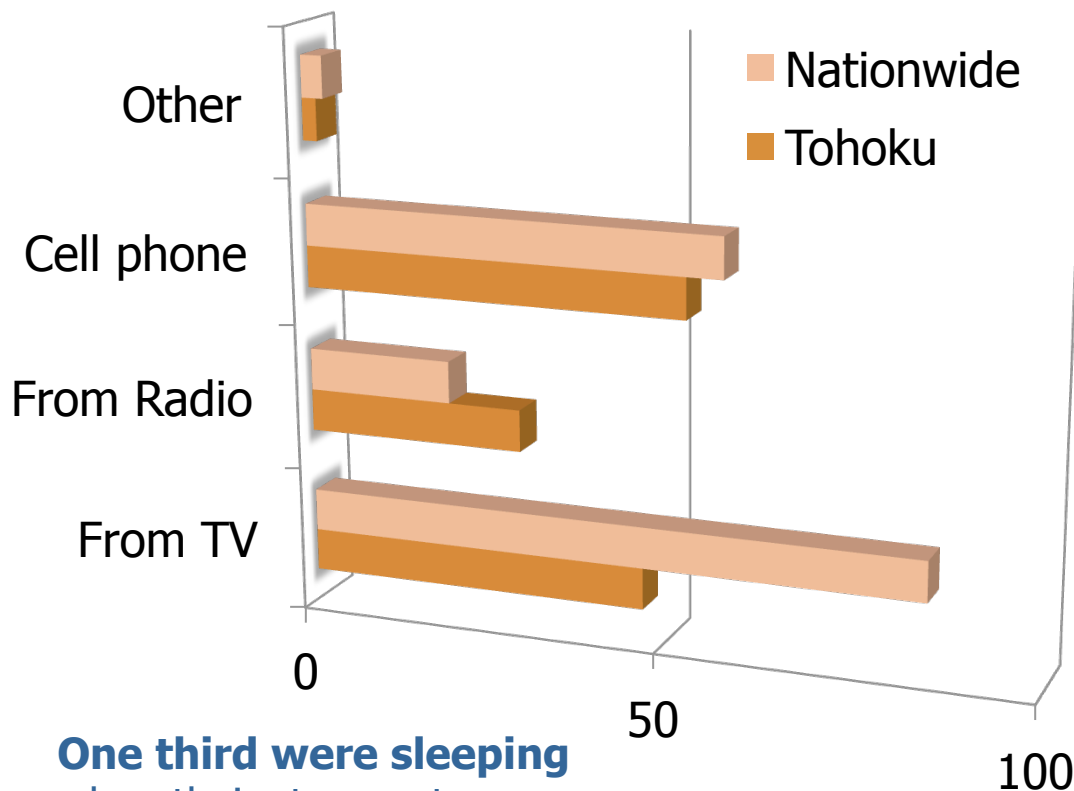

Data provided by Hoshiba

<http://www.jma.go.jp/jma/press/1203/22c/manzokudo201203.html>

JMA Survey of the Public

How have you received warnings?

One third were sleeping when their strongest earthquake occurred
 Of those sleeping
62% in the Tohoku region, and
75% nationwide were
woken by cell phone warning

Most useful cell phone app

1. Email 58%
2. Earthquake alerts 25%
3. TV 23%
4. Twitter, Blog 17%
5. Transportation info 11%

Asahi Shinbun Newspaper – June 2011

Data provided by Hoshiba

Earthquake early warning Around the world

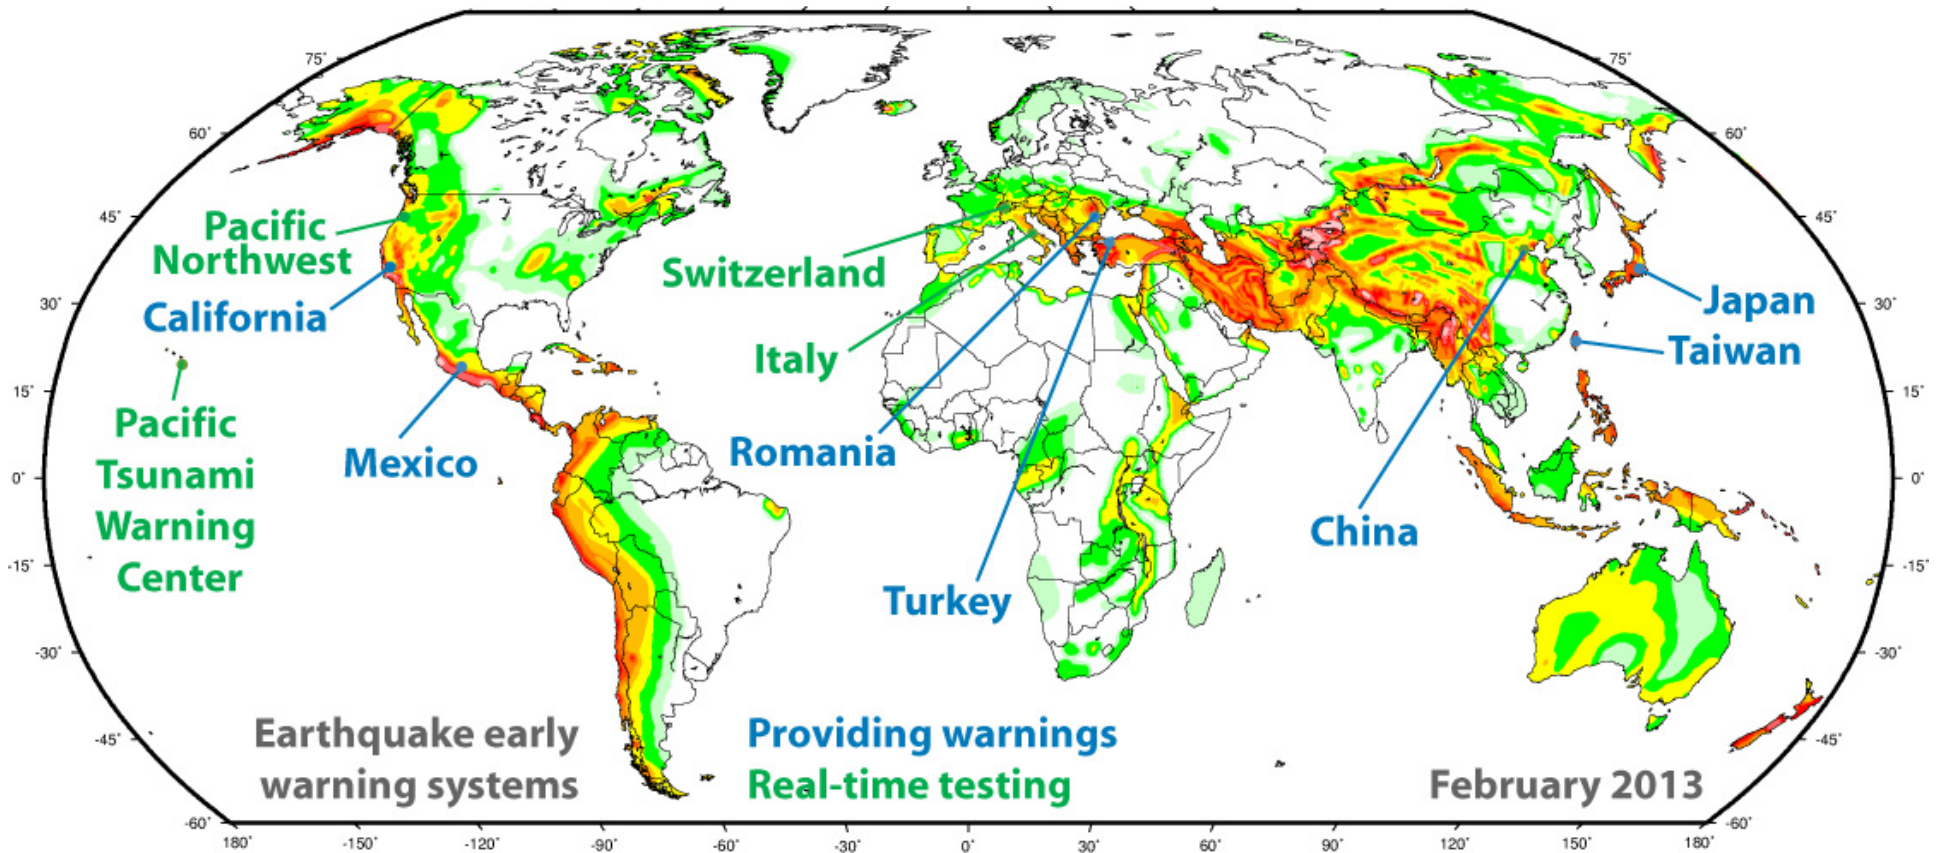

Mexico: Since 1991,
subway, schools

Turkey: rail, power grid,
expanding system, OBS

Taiwan: Railroad,
hospital, new networks

Romania:
Nuclear research facility

China: multiple regional
systems, Twitter release

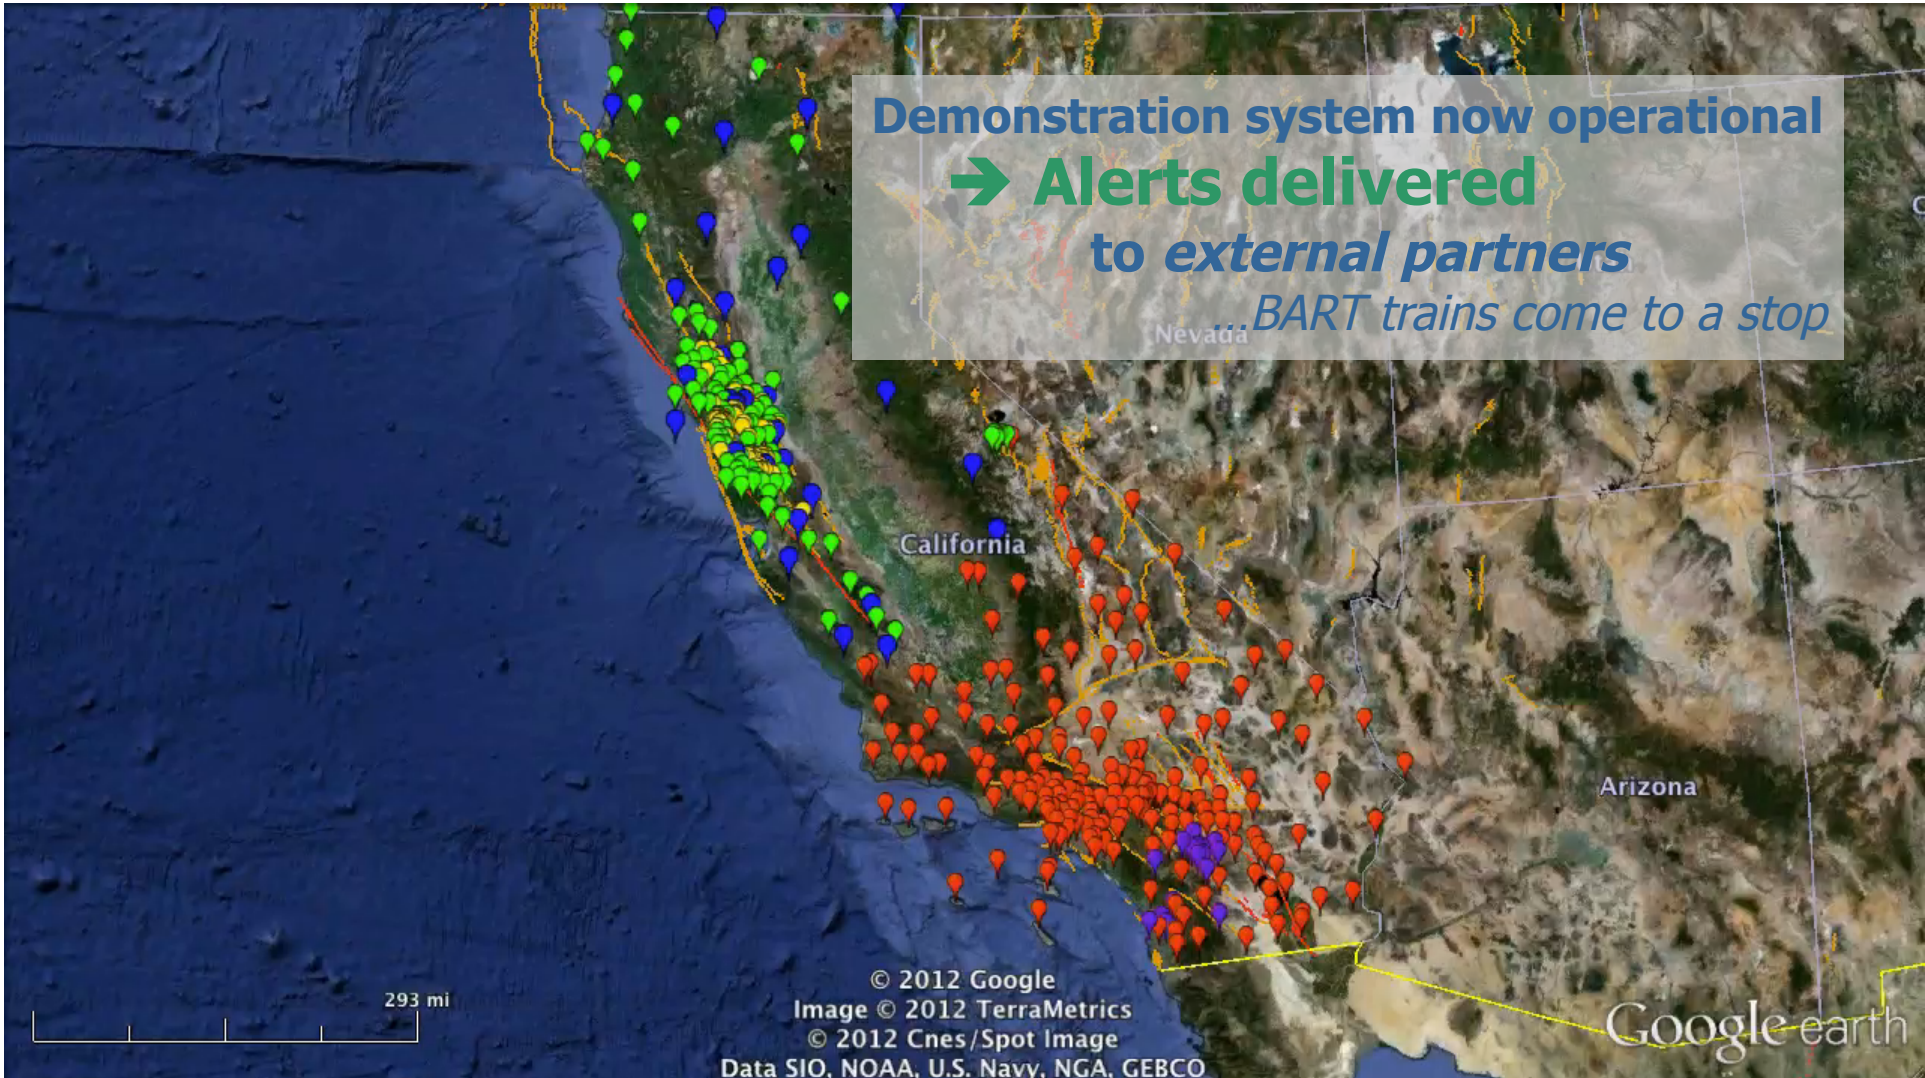

Earthquake Hazard: Peak ground acceleration (ms⁻²) with 10% probability of exceedance in 50 years

Challenges: The **Big One**

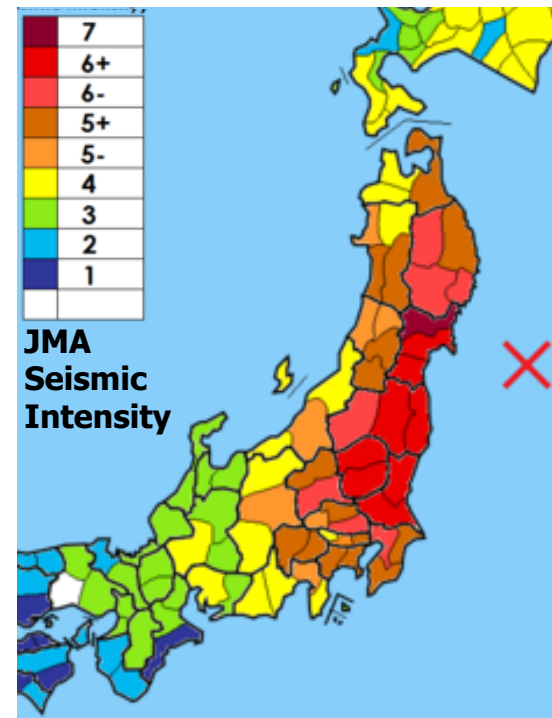

M9 Tohoku-Oki ...what to expect in the Pacific Northwest

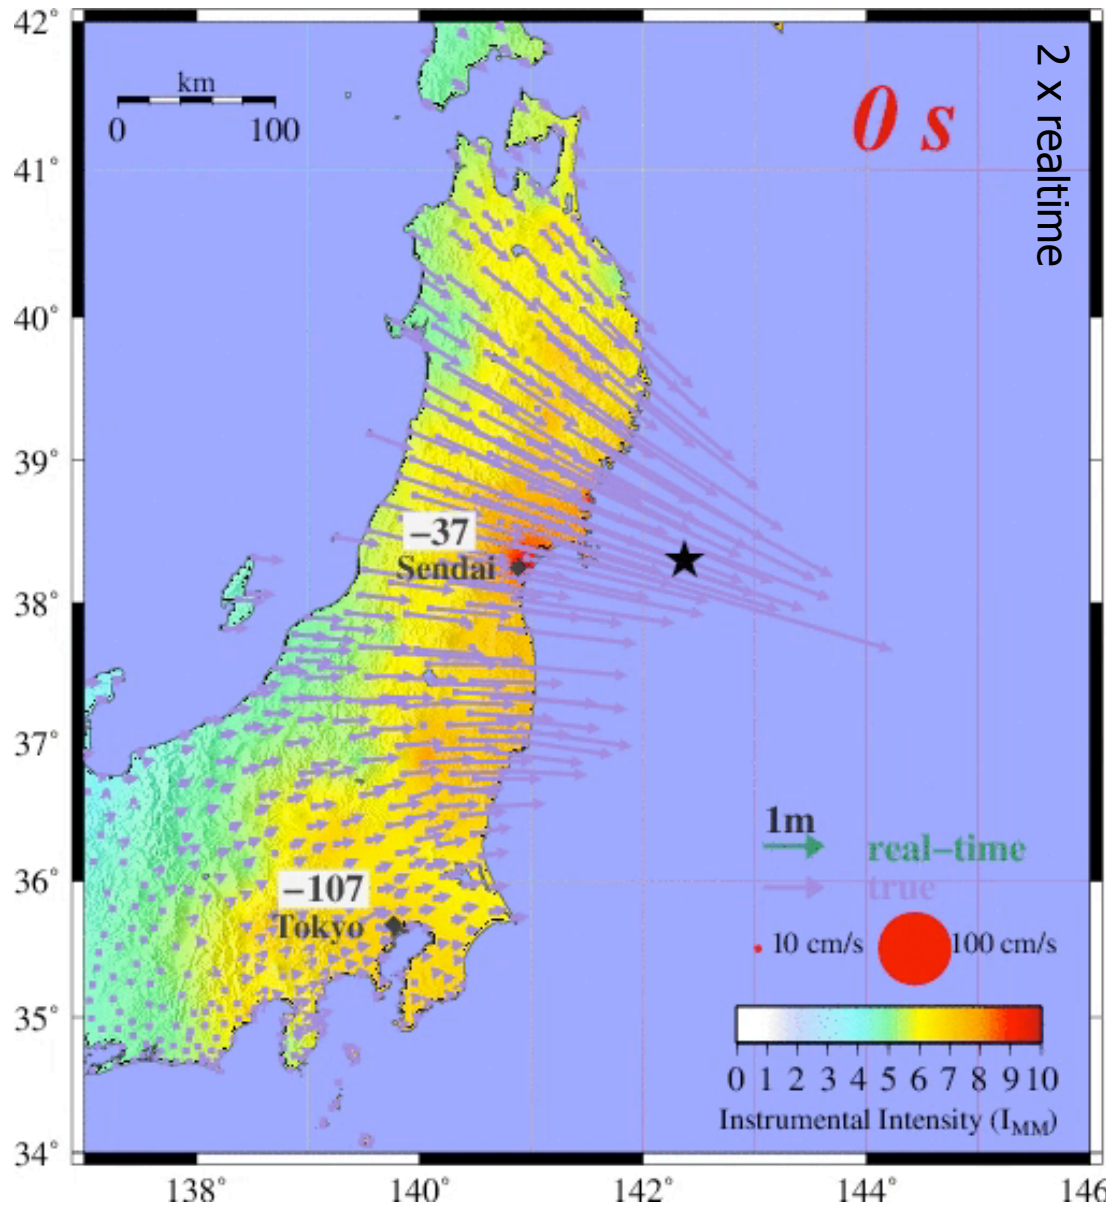

100 sec
rupture duration

5 meters
permanent displacement

Colombelli and Allen, in review

M9 Tohoku-Oki ...what to expect in the Pacific Northwest

Timeline

- 37s S-wave at Sendai
- 40s Detect GPS signal
- 50s 1st phase displacement
observable: 2m
- 95s Strongest shaking along coast
- 95s 2nd phase displacement
observable: 5m
- 110s S-wave at Tokyo
- 170s Strongest shaking in Tokyo

M9 Tohoku-Oki

0T+

31s *First seismic alert 8 s before shaking in Sendai*
 JMA estimate: M7.1
 GPS estimate: **n/a**

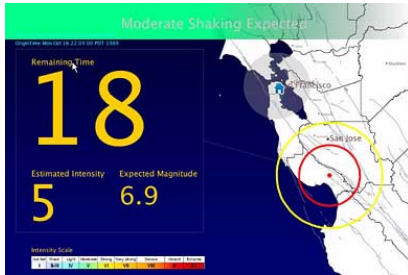

39s *S-waves reach Sendai*
 JMA estimate: M7.6
 GPS estimate: **M8.2**

60s *15s before peak shaking in Sendai*
 JMA estimate: M7.6
 GPS estimate: **M8.4**

130s *35s before peak shaking in Tokyo*
 JMA estimate: M7.6
 GPS estimate: **M8.9**

Conceptual Alert timeline

P-wave based alerts

CISN test system

5-15 sec location, magnitude

Initial GPS-based magnitude

15-30 sec magnitude verification and update

Strong shaking at greater distances

More GPS-based constraints

ongoing... magnitude verification and update

Tokyo strong shaking in Tohoku-oki

origin time

Strong shaking near epicenter

Outlook

Earthquake early warning is experiencing rapid growth and development around the world

Driven by rapid development of

- earthquake source science
- distributed sensor technologies
- communication connectivity

At a time of

Increasing complexity and fragility of our infrastructure

big data + science + connectivity = opportunity

Prediction: The US will build an early warning system.

Will it be before, or immediately following the next big earthquake?
